

These diagrams illustrate how to communicate the flow and status of information systems. They are 3 types of diagrams:  
1. Data Flow Diagram (DFD)  
2. Entity-Relationship Diagram (ERD)  
3. UML Class Diagram

Each diagram has its own set of symbols and rules.

Each diagram has its own set of symbols and rules. The symbols used in the diagram are:

1. Data Store: Represented by a cylinder shape. It is used to store data for a long period of time. It is connected to the process by an arrow pointing to or from the process.

2. Process: Represented by a rectangle shape. It is used to perform a task or operation. It is connected to the data store by an arrow pointing to or from the process.

3. External Entity: Represented by a stick figure shape. It is used to represent a person or organization that interacts with the system. It is connected to the data store by an arrow pointing to or from the data store.

Each diagram has its own set of symbols and rules.
