

For a business organization to offer business services to their customers, they need software application. Manually conducting the business is an tedious job and takes lot of time and leads to incorrect/fraud in carrying the business

To efficiently and effectively operate in conducting the business an organization requires an software application.

As part of an software application, it needs to provide several services aspart of its system:
For eg.. an Insurance Organization requires an software application which should comprises of several modules or services aspart of it

- 1. Member enrollment
- 2. Hospital Network Management
- 3. Claim Settlement
- 4. Cashless facility
- 5. Claim Reimbursement
- 6. Premium Payments
- 7. Renewals
- etc
